COST MATCH

Pre-posted invoice from Würth

It is important to target the invoiced products to the right product accounts in order to monitor costs and to develop the profitability of business operations.

Posting is still often manual and time consuming work – and done by persons, who's main job is to do something else. When manual posting is done line-by-line it is likely to commit a mistake. Posting is also open to interpretation, especially with small parts where there are thousands of titles and dozens of product areas. Depending on the accountant the same product can be posted to different product accounts.

- **ACCOUNTS**
- **COST CENTERS**
- **JOB NUMBERS**
- **ACCOUNT CODES**

WÜRTH COST MATCH ADVANTAGES:

- Significant time saving in invoice checking and posting
- Unifies posting protocols for MRO products
- Does not require a purchase order from the client
- Does not require client's own product codes, nor time consuming maintenance
- Client's cost center data is saved into Würth's data systems
- Easy to implement, does not cause significant costs to the client
- The only requirement is the client's ability to receive electronic invoices and posting data

With small products, the cost of the time spent solely on posting may be even higher than the value of the product itself!

Würth Oy offers a modern solution where the objective of e-invoice posting proposals is to enable a simple and functional model for the automatic posting of purchase invoices and payment transactions. Also the cost center data can be is added to the invoice message, thus all client's manual and routine preliminary preparations for invoice handling can be removed.
